"It was comforting to get a second opinion on my husband's cancer diagnosis. We were not entirely confident in what our local doctors were recommending. We chose John's Hopkins as our leading medical center and they did a thorough review of the information and re-read all the slides and lab images. They found three more tumors on his CT scan that our local doctors missed. Overall it gave us peace of mind, without having to physically travel out of state during this stressful time. It was wonderful that our life insurance offered this benefit; we figured they were very motivated to keep him alive! Sean continues to work and feels good."

Thanks!
Christine
